

# EL WRAP

## EL WRAP Basics

- Continuous overwrapper for single cups or packs
- Integral, automated flow-merger/stacker
- Carton magazine in a low position providing optimum access
- Packs closed on top by “hot-melt” gluing

## Important points

- Modular, upgradeable design
- Industrial efficiency
- Ergonomics and safety

# EL WRAP | CONTINUOUS CARTON OVERWRAPPER

## Modular & upgradeable design

- The EL-WRAP can be adapted to suit the desired packs: wrap-around cartons, economy or "drop-through" cartons
- Variable pitch technology to adjust the machine pitch and therefore the linear speed to suit the pack sizes (1x2, 1x4, 2x2, 2x4, 4x4...)

## Industrial efficiency

- Continuous process by synchronization of servomotors
- Automated format change
- Quick-to-remove format tooling
- Automatic pitch adjustment according to pack type
- Optimum adaptation with robotic feeding tools

## Ergonomics and safety

- Large-capacity magazine accessible without operator platform, with wide carton loading opening
- Quick change of format without the need for special tools
- Stainless steel frame structure with minimum 150mm ground clearance
- Doors with safety contact and Makrolon housing gives maximum visibility of the overwrapping zone
